

T4-101 Threshold Strip

T4-101 Threshold Strip

The T4-101 is designed to create a highly visible step edge to reduce falls and enhance speed in all situations whether light, dark or dimly lit.

The photoluminescent strip is visible for many hours after the lights go out, having been charged from sunlight or artificial light.

The aluminium ridges provide all weather protection from slips and falls.

The T4-101 can be easily glued into place. It can also be mechanically fixed by drilling through the non-slip area as suited to the location.
